

HRP Donkey Anti-Goat IgG (H+L)

Human Adsorbed

Cat.#: 4301-100

DESCRIPTION: HRP Donkey Anti-Goat IgG (H+L), human adsorbed.

ANTIBODY CONTENT: 100µg

PREPARATION:

Antibodies were purified by affinity chromatography and adsorbed to remove cross reactivity to human immunoglobulins. The resulting antibody was conjugated to Horseradish Peroxidase.

BUFFERS AND PRESERVATIVES:

This reagent is provided lyophilized from a solution containing 10 mM Sodium Phosphate, 0.15 M Sodium Chloride, pH 7.2, 1% (w/v) BSA as a stabilizing protein and 0.1% Kathon CG as a preservative.

RECONSTITUTION:

Reconstitute with 100 µl of deionized water and let stand 30 minutes at room temperature to dissolve. Centrifuge to remove any particulates. Prepare fresh working dilution daily.

STORAGE/STABILITY:

Store lyophilized material at 2-8°C. For long term storage after reconstitution, dilute with 50% glycerol and store at -20°C as a liquid.

RECOMMENDED DILUTIONS: 1:20-1:2000 for most immunoassay and immunomicroscopy applications.

Because applications vary, we recommend that the customer determine the optimum amount for each application.

Research Use Only
